

MAC AND APPLE MANAGEMENT SERVICES

Providing holistic IT management

Across all your macOS and iOS devices

Some employees are more productive on Mac® computers and some projects require Mac functionality. You may have bought Mac devices for your business because you want devices to work seamlessly.

But...

Unmanaged Mac devices could pose a security risk for your business.

- Unmanaged Mac devices are more likely to be unpatched and unprotected, leaving them vulnerable to malware and other security threats.
- Businesses that allow employees to use their own Macs or purchase them themselves may not have complete control over the device or knowledge of its security posture.
- IT departments often lack the expertise to manage and secure macOS devices effectively.
- Macs are not typically managed by traditional enterprise mobile device management (MDM) solutions, so a separate solution is required.
- There is often a lack of visibility into what apps and services are being used on Mac devices, making it difficult to ensure compliance with corporate policies.

Why Apple-only businesses choose to partner with our team.

24/7 support
for all your
devices

Experienced Mac people
to help you with Mac
challenges

Proactive monitoring and
management to help keep
everything running smoothly
and securely
